EURFLEX® Stab-protection gloves and aprons

We celebrated our 30-year company anniversary as a manufacturer of metal ring mesh. We are the second generation, full of drive and constantly on the lookout for innovations, even for the smallest details.

Our Euroflex-comfort stab-protection glove has a **patented, ergonomic fit**. Even non-professionals will recognise the purpose of the curved design and professionals will feel the advantages during the first few seconds of use.

As the only stab-protection glove with ergonomic fit the Euroflex provides the best possible wearing comfort, less strain on users, ideal protection against cuts and stabs as well as a longer life. The smart design of the glove's replaceable strap allows easy handling in the cleaning process and during servicing.

We will present new wire mesh versions that **reduce the weight by up to 20%** together with stab-protection aprons and boleros at the IFFA2010 trade show!

New developments and materials from the safety vest field for police and military are thus also entering safety products for the meat, poultry and fish processing industry. These synergy effects are actually welcome and our absolute strengths as a flexible medium-sized company.

For some time now, we have offered industrial enterprises (slaughterhouses and cutting plants) specially in Europe and Brazil the option of **renting instead of buying** the stab-protection set comprising glove and apron or bolero. Purchasing department no longer need to worry about whether to buy inferior products made in the Far East due to their financial constraints or to invest in the safety of their staff according to the CE standard.

If you are interested, we will be happy to talk to you about our trend-setting service.

You are also welcome on our booth during the **IFFA 2010, Halle 9.1C50**
